

The Pioneer in Postbiotics.

The gut feeling you can trust.

LBiome™ is a human strain-derived, heat-treated postbiotic (*Lactobacillus* LB) that has been used as a digestive aid for over a century. Researched in postbiotic form for over 100 years, LBiome is the “Pioneer in Postbiotics,” with 12 published clinical studies showing digestive health support for both adult and pediatric populations. LBiome provides the digestive benefits of a probiotic and the formulation flexibility of a spore, with none of the stability or manufacturing concerns.

How does LBiome work?

LBiome is a postbiotic, so there are no live organisms present. However, LBiome heat-treated cells and metabolites continue to provide quick and efficacious digestive health benefits. LBiome cells adhere to the gut lining, supporting a healthy bacterial balance in the digestive system, all while simultaneously strengthening the gut lining by supporting a healthy brush border and tight junctions. These mechanisms of action produce fast results for calming lower GI upset, as seen in the many published LBiome clinical studies.*
