

# Ahiflower<sup>®</sup> Oil's Sustainable & Traceable Supply Chain

As a fully scalable and sustainable source of omega 3-6-9, Ahiflower oil can help your brand engage consumers with meaningful sustainability messaging, and clear traceability.

Ahiflower's supply chain supports soil health, pollinator wellness, and only utilizes natural manufacturing operations. Ensuring the health of both the environment and our customers is a core value of Natures Crops.

Ahiflower is grown regeneratively by qualified UK farmers, helping to deliver:

- Enhanced soil quality & microbial activity
- Increased farm biodiversity
- Pollinator support for bees & butterflies
- Positive carbon capture

Once harvested, Ahiflower seeds are mechanically pressed to extract the oil without the use of hexane or solvents.

Oil undergoes a light filtration and refining process to help reduce color and sensory of the oil.

Pure Ahiflower oil is then supplied to GMP certified facilities to produce liquid supplements, softgel capsules, gummies, and more.

NCI partners with leading supplement brands to bring quality products to consumers around the world.
